➤ Aperçu du produit

Quickie has developed a dramatic new approach to tilting in space. It's called the Quickie® IRIS™ (Intelligent Rotation In Space). Unlike systems that incorporate a fixed pivot-point, dual pivot-point, or linear element, the Quickie® IRIS™' rotational design is based on the idea of rotating the seat-frame around a user's center-of-gravity. This, combined with up to 60° of posterior rotation and hi-resolution adjustment, provides the ultimate in control, maneuverability, and stability.

➤ Points forts

A.R.T. Group

The preeminent custom configured seating company whose product portfolio includes some of the most well respected brands in the industry - Adaptive Equipment Systems (AES), Rehabilitech, and Whitmyer Biomechanix, Inc. Their innovative designs have enabled clinicians & suppliers to assist in positioning the most profoundly involved clients. Sunrise Medical + A.R.T., now that's SMART! [A.R.T. Group website](#)

Rotation-In-Space

The Quickie® IRIS™ utilizes a rotational tilt-system. Instead of tilting the seat frame from an outside pivot-point the Quickie® IRIS™ actually rotates the seat frame around the users center-of-gravity. This rotational system provides the shortest possible wheelbase without compromising stability. It also insures a smooth

and controlled rotation.

The 60° Tilt Advantage

The Quickie® IRIS™ features three tilt ranges: - 5° to 50°, 0° to 55°, and 5° to 60°. As the seat frame rotates past 45°, a significant amount of pressure transfers from the seat to the back. By providing up to 60° of tilt, the Quickie IRIS insures that the majority of pressure is removed from the ischial tuberosities.

Built-In Adjustability

The Quickie® IRIS™ has extensive built-in adjustability. The chair frame can literally expand from 14" -22" in width and 15" - 22" in depth changing only four small parts. This vast range of built-in adjustability provides a precise center-of-gravity adjustment without replacing large frame-assemblies.

- ▶ A transit option is available for 250 lb. and 350 lb. user weight-limits. Most tilt users have difficulty making transfers and many are required to remain in their chair. The transit option avoids many of the problems associated with transferring in and out of the chair during transportation.
- ▶ Special aluminum alloys make the Quickie® IRIS™ one of the lightest manual rotation-in-space chairs in today's market.
- ▶ The Quickie® IRIS™ features a special angle-adjustable stroller handle that quickly adjusts to a variety of caregiver heights.
- ▶ A patented backpost bracket allows repositioning of the backpost seat-depth without removing the attaching hardware.
- ▶ Specialty options, such as a reclining backrest, vent-and-battery tray, and one-arm drive are all available as "on-chair" options.
- ▶ A tilt-angle indicator and a set of tilt-stops ship with every chair to provide a precise tilt range and tilt angle-setting.
- ▶ The Quickie® IRIS? features a 14" front seat-to-floor height. Using a drop seat, this distance can be lowered to a 12 ½" seat-to-floor height.
