

What is Discover:Screen?

Discover:Screen is the software-only solution that puts a customizable keyboard on the computer screen. Discover:Screen is ideal for people who physically cannot move their head down to look at a keyboard and then back up to the computer screen. It's great for people who lose their focus when moving between keyboard and computer screen, too. Use Discover:Screen with a touch screen so users can point to make selections. Or use Discover:Screen with a mouse, joystick or TrackerPro. Discover:Screen is a flexible writing tool. It's easy to type whole words or letter by letter to do writing assignments, send email, etc. Keyboards can be edited. Several on-screen keyboards are included. New custom keyboards can be created with TemplateMaker (purchased separately).
