

From MS Word to Braille Book

1. Open your document in Word.
2. Press "emboss" button in Word.
3. The document is translated, formatted by WinBraille and embossed according to your selected braille template.
4. Formatting to newspaper format is done automatically by the 4X4PRO.
5. Emboss as many copies as you require.
6. Staple the document.
7. Fold and your braille book is ready.

Production Embosser

The 4X4 PRO is made for mass production of Braille, and is by far the most sold embosser in the world in this segment. High printing speed, low paper cost and competitive pricing make the 4X4 PRO a most cost-effective production embosser.

Magazine format

The 4X4 PRO, with its unique capacity to emboss braille in magazine format, makes it one of the most used embossers for the production of braille books in the world. Embossed documents are ready for immediate use after folding and stapling. Emboss from your computer as usual and 4X4 PRO takes care of the newspaper page formatting automatically.

Speech guided

4X4 PRO is controlled by an ink and braille labelled front panel. Combined with the speech feedback it is easy to install and operate by blind and sighted users alike.

Reliable

The 4X4 PRO is a reliable efficient system for mass production of braille books. Since many years braille productions centres around the world have extensively used it. This experience has shown that 4X4 PRO is an effective system with high safety of operation. This year's model, (version III) stands for higher quality and is even more reliable than previous versions.

Local paper

Locally produced paper of suitable card quality is usually available in most countries and works very well with the 4X4 PRO. This helps to reduce paper costs compared to importing specially produced tractor fed braille paper for traditional embossers.

4X4 PRO Embossing unit version III includes

- Parallel port (ECP, EPP, SPP)
- USB port
- Network port (TCP/IP)
- Serial port (RS 232C)
- Light diodes for status information

WinBraille - Included free braille editor

Quick and easy embossing in contracted or normal braille in Word, Outlook, Explorer
